Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on December 1, 2011 has been entered.

Reasons for Allowance

2. Claims 1-12 are allowed.

3. The following is an examiner's statement of reasons for allowance:

The invention claims an anti-theft system for a vehicle in which both human body certification and electronic key identification has to be provided to the anti-theft system in order for the vehicle door to be unlocked. The engine of the vehicle is started by certifying only the electronic key identification without performing any biometric authentication. In order for the engine to be started with the provided electronic key identification, the electronic key identification provided for starting the engine has to be the same electronic key identification that was provided for unlocking the door of the vehicle, wherein the engine starting switch does not start the engine if the electronic key is certified by the certifying device for starting the engine but the electronic key is an electronic key whose ID information is not memorized in the memory (it is memorized in the memory when the door is unlocked by the door lock control device based on the

Art Unit: 2612

electronic key being certified by the certifying device for getting in the vehicle and the human body certification information of the person being confirmed), after the vehicle door is unlocked by the door lock control device. The prior art does not disclose the claimed invention in the manner claimed.

The invention also claims an anti-theft system for a vehicle in which both human body certification and electronic key identification has to be provided to the anti-theft system in order for the engine of the vehicle to be started. A memory memorizes the electronic key identification when the engine is started by the engine starting switch based on the electronic key being certified and the human body certification information has been confirmed, and the door of the vehicle is unlocked if the electronic key is certified for starting the engine and the electronic key is an electronic key whose ID information is memorized in the memory without performing human body certification. The vehicle door is unlocked when the electronic key identification that was used for starting the vehicle is provided for unlocking the vehicle. The door locking control device does not lock the door of the vehicle if the electronic key is certified by the certifying device of the electronic key for starting the engine but the electronic key is an electronic key whose ID information is not memorized in the memory, after the engine is started by the engine starting switch. The prior art does not disclose the claimed invention in the manner claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Art Unit: 2612

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
